## ALIGNMENTS

RESULT 1 AAB20142

Cattle growth differentiation factor 8 C-terminal region.

30-APR-2001 (first entry)

AAB20142;

AAB20142 standard; Protein; 109 AA.

```
Increasing the muscle mass of animals used in meat production by down regulating growth differentiation factor 8 (GDF-8) activity in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       growth rate of farm animals. Variants of GDF-8 (see AAB20145-53)
are provided that are capable of breaking autocolerance against
cautologous GDF-8. These comprise the C-terminal portion of human
GDF-8 in which a portion of the native sequence is replaced by a
T-cell epitope such as the promiscuous tetanus toxin T-cell epitope
T-cell epitope such as the promiscuous tetanus toxin T-cell epitope
T-cell epitope such as the promiscuous tetanus toxin T-cell epitope
T-cell epitope such as the promiscuous tetanus toxin T-cell epitope
T-cell epitope such as the promiscuous tetanus toxin T-cell epitope
T-cell epitope such as the promiscuous tetanus toxin T-cell epitope
T-cell epitop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence comprises the 109 amino acid residue C-terminal region of cattle growth differentiation factor 8 (GDF-8). i.e. residues 267-375 of the full-length protein (see AAB20132). The homodimer of this region is thought to be the biologically active form of GDF-8. It is an object of the invention to produce a recombinant therapeutic vaccine capable of effecting down-regulation of GDF-8 in order to increase the muscle growth rate of farm animals. Variants of GDF-8 (see AAB20145-53)

                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC and adipose tissue. The sequence was deduced from a cDNA clone CC (see AAV45818) isolated from a skeletal muscle cDNA clone CC invention provides novel mammalian and avian GDP-8 proteins (see CC AAW5983-92). A transgenic non-human animal is claimed in which CC GDP-8 expression is disrupted or interfered with. Also claimed CC are: (1) chicken or turkey eggs or meat, beef, milk, pork and lamb CC animals by administering an antibody (Ab) that binds to GDF-8; (3) CC inhibiting the action of GDP-8 by treating foetal or abilt muscle CC arid encoding a GDP-8 protein truncated by loss of the C-terminal CC active fragment. The transgenic animals have increased muscle mass CC and for poultry reduced cholesterol contents. Method (3) is used to treat muscle wested poultry reduced cholesterol contents. Method (3) is used to treat muscle injuries, congestive or obstructive lung disease, AIDS CC and aging, particularly muscular dystrophy, spinal cord or traumatic injuries, congestive or obstructive lung disease, AIDS CC and cachexia. Method (4) is used to treat cancer of muscle CC and cachexia. Method (4) is used to treat cancer of muscle CC and seed to maintain myblasts intended for transplanting or to CC improve efficiency of fusion. Ab can be used to detect and CC quantify GDP-8 (particularly in muscle, for diagnosis or monitoring), cross also for immunotherapy and in vivo imaging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 109;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides myostatin peptides consisting of 3-100 amino acids, derived from a region of mouse, rabbit, human, baboon, bovine, porcine, ovine, chick, turkey or zebrafish myostatin (see sequences AAY33930-939). The myostatin peptides are derived preferably from a region of amino acid residues 1-275, 25-300, 50-325 or 75-350 of the above sequences. The peptides and the nucleic acids encoding the peptides are useful as vaccines for eliciting an immune response in a vertebrate against a myostatin immunogen. They result in increasing body weight, muscle mass, number and size of muscle cells, muscle strength, mammary gland tissue, lactation, appetite or feed uptake, life span of the vertebrate, and cause a reduction in body fat content, useful for muscle wasting conditions. The vaccines are also useful for treating a disorder which comprises degeneration or wasting of muscle in a vertebrate, and useful for modulating GDPII activity. The present sequence represents
                                                                                                                                                                                                                                                                                     09-NOV-1999 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 4; Fig 1A-D; 109pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New myostatin peptide, multimers and immunoconjugates for eliciting an immune response in a vertebrate against a myostatin immunogen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention provides myostatin peptides consisting of 3-100 amino caids, derived from a region of mouse, rabbit, human, baboon, bovine, porcine, ovine, chick, turkey or zebrafish myostatin (see sequences C porcine, ovine, chick, turkey or zebrafish myostatin (see sequences C ANY3330-939). The myostatin peptides are derived preferably from a region of amino acid residues 1-275, 25-300, 50-325 or 75-350 of the cabove sequences. The peptides and the nucleic acids encoding the peptides are useful as vaccines for eliciting an immune response in a vertebrate cagainst a myostatin immunogen. They result in increasing body weight, muscle mass, number and size of muscle cells, muscle strength, mammary gland tissue, lactation, appetite or feed uptake, life span of the comprises degeneration or wasting of muscle useful for muscle wasting conditions. The vaccines are also useful for treating a disorder which comprises degeneration or wasting of muscle in a vertebrate, and cuse of special for modulating dDF11 activity. The present sequence represents the amino acid sequence of bovine myostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches 109;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel recombinant cell lines that express CC growth-differentiation factor-8 (GDF-8) receptor polypeptide or GDF-11 CC (earl) approises. The GDF receptors are used to identify specific CC (ant) agonists, potentially useful therapeutically in human or veterinary CC medicine. Antibodies derived from the products of the invention are used to treat muscle tissue diseases (particularly wasting diseases, communicated and somatic cells, specifically where GDF-8 receptor is expressed, compensed muscle mass. Peptides derived from the products of the invention and GDF-receptor binding and blocking agents, are reagents and convention and GDF-receptor binding and blocking agents, are reagents and compension of the speculic agents. This sequence represents the bovine CC GDF-8 protein which is used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

It is an object of the invention to produce a recombinant therapeutic vaccine capable of effecting down-regulation of GDF-8 in order to increase the muscle growth rate of farm animals. Variants of GDF-8 (GDF-8 (GDF-8)) are provided that are capable of breaking autocolerance against autologous GDF-8. These comprise a C-terminal portion of human GDF-8 in which a portion of the native sequence is replaced by a recombination of the native sequence is replaced by a recombination of the native sequence is call epitope such as the promiscuous tetanus toxin T-call spitope and a series encoding the GDF-8 variants can be used for genetic immunisation of the animals. Down-regulation of GDF-8 activity is used to increase muscle mass by up to at least 45% in cattle, pigs and poultry used for meat production, reducing the need for antibiotic feed-additives. Anti-GDF9 vaccines can be used to treat human diseases such as cancer cachexia where muscle atrophy heart failure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 109;

The present invention relates to a purified promyostatin polypeptide CC portion. A myostatin peptide is useful as a target for treatment of CC neurodegenerative diseases such as amyotrophic lateral sclerosis or CC transduction, while mature myostatin prodomain inhibits myostatin signal CC transduction, while mature myostatin peptide referred as myostatin is CC useful for inducing myostatin signal transduction by interacting CC specifically with myostatin receptor expressed on the surface of the CC cell. Modulating myostatin signal transduction is useful for regulating CC skeletal muscle mass, where promyostatin portion is a negative regulator CC rausele growth Modulating myostatin signal transduction in a muscle CC cell or adipose tissue is useful for treating pathological conditions associated with myostatin such as obesity and type II diabetes, cachexia, CC myocardial infarction, muscle wasting disorders such as muscular CC dystrophy, neuromuscular disorders, or anorexia. Myostatin prodomain is useful for modulating the growth of muscle mass or CC organism. Myostatin prodomain is useful for increasing muscle mass or CC complete content of an organism which is useful as a food source, and myostatin peptide is useful for decreasing the growth of muscle mass or CC myostatin which has dominant negative activity with respect to myostatin or growth differentiation factor (CDP)-II is useful for reducing or inhibiting myostatin farential transduction. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a substantially purified growth differentiation factor (GDF) receptor, specifically a myostatin receptor, or its functional peptide portion. Also described is a method of modulating an effect of myostatin on a cell by contacting the cell with an agent that affects myostatin signal transduction in the cell. The method and the receptor are useful for ameliorating the severity of a pathological condition characterised by an abnormal amount, development or metabolic activity of muscle or adipose tissue in a subject, particularly a wasting disorder (e.g. cachexia, anorexia, muscular dystrophy or neuromuscular disease) or a metabolic disorder (e.g. obesity or type II diabetes). The present sequence represents the amino acid sequence of bovine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New growth differentiation factor (GDF) receptors and modulators, useful for ameliorating wasting disorders such as cachexia, muscular dystrophy or neuromuscular disease or a metabolic disorder such as obesity or type II diabetes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-FEB-2002.

                                                                                                                                                                                                                                                                                  Вр
                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                  CC This is the amino acid sequence of bovine myostatin, a member of CC the transforming growth factor beta superfamily, as encoded by the CC wild-type gene (see AAX24416). A mutation of this gene (see AAX24416) CC has been detected in cattle. Cattle of the Beigian Blue breed CC homozygous for the mutant gene are double-muscled. A new method of CC increasing muscle mass of a mammal having myostatin-expressing cC muscle cells, complementary to at least a portion of mRNA cencoding myostatin and of sufficient length to reduce myostatin expression and thus increase muscle mass. A ribozyme may also be CC used. Also claimed are: a method for determining muscular C hyperplasia (MH) in a mammal susing primers based upstream and constream of the mutation; a diagnostic kit for determining CC determining MH in a mammal; a method for determining the myostatin cC genotype of a sample of genetic material; a method for determining the myostatin cC muscling in a bovine animal; a method for determining the myostatin cC muscling host cell; a probe based on the myostatin gene cutive myostatin, and a heterologous nucleotide sequence encoding a crive myostatin, and a heterologous nucleotide sequence antisense cc to that gene, and optionally further containing a gene encoding a cutive myostatin, and a heterologous nucleotide sequence antisense cc to that gene, and optionally further containing a gene encoding a colleic acid sequence with ribozyme activity in transcriptional axis association with the antisense sequence.
                                                                                                                                                                                                                                                                                                                                                          Matches 108;

The homodimer of this region is thought to be the biologically active form of GDF-8. It is an object of the biologically active form of GDF-8 in tis an object of the muscle CC invention to produce a recombinant therapeutic vaccine capable of CC effecting down-regulation of GDF-8 in order to increase the muscle CC growth rate of farm animals. Variants of GDF-8 (see ABB20145-53) CC are provided that are capable of breaking aurotolerance against autologous GDF-8. These comprise the C-terminal portion of human CC GDF-8 in which a portion of the native sequence is replaced by a CC reell epitope such as the promiscuous tetanus toxin T-cell epitope CP 2 or P30. The high number (9) of Cys residues in the C-terminal CC positioned without major disturbance of the native 3-dimensional CC structure of the protein. Nucleic acids encoding the GDF-8 variants CC can be used for genetic immunisation of the animals. Down-regulation CC GADF-8 activity can increase muscle mass by up to at least 45% in CC cattle, pigs and poultry used for meat production, reducing the need CC treat human diseases such as cancer cachasia where muscle atrophy is corronanced and for patients suffering from acute and chronic heart

The protein is a member of the transforming growth factor beta (TGFbeta) superfamily. The mutant sequences of the invention can be used in the treatment of diseases associated with the overexpression of TGFbeta family proteins, including ectopic bone formation, psoriasis, muscular atrophy, scar formation, fibrosis and cirrhosis. The present sequence is the human GDF8 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; TGFbeta; transforming growth factor beta; mutant; antagonist; agonist; ectopic bone formation; psoriasis; muscular atrophy; scar; formation; fibrosis; cirrhosis; osteopathic; antipsoriatic; antifibrotic; hepatotropic; vulnerary; GDF8.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COPT-8 expression is disrupted or interfered with. Also claimed are: (1) chicken or turkey eggs or meat, beef, milk, pork and lamb if from these animals; (2) method for increasing muscle mass in animals by administering an antibody (Ab) that binds to GDP-8; (3) in hibiting the action of GDP-8 by treating foetal or adult muscle or progenitor cells with a GDP-8 inhibitor; (4) isolated mucleic or progenitor cells with a GDP-8 inhibitor; (4) isolated mucleic active fragment. The transgenic animals have increased muscle mass and agring, particularly muscular diseases, muscular atrophy traumatic injuries, congestive or obstructive lung disease, AIDS and againg, particularly muscular dystrophy, spinal cord or craumatic injuries, congestive or obstructive lung disease, AIDS and cachexia. Method (4) is used to treat cancer of muscle, for can be used to maintain myoblasts intended for transplanting or to improve efficiency of fusion. Ab can be used to detect and quantify GDP-8 (particularly in muscle, for diagnosis or monitoring), also for improverse for improverse for fusion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is the amino acid sequence of the C-terminal region of the GDP-8 precursor protein. The predicted GDF-8 sequence contains two potential proteolytic processing sites.

Cleavage of the precursor at the second of these sites would generate a mature C terminal fragment 109 amino acids in length with a predicted molecular weight of 12,400.

GDF-8 has been shown to result in increased bone and muscle mass (such as ribs) when expressed in reduced amounts. GDF-8 minus transgenic animals and forms of animal feed that can inhibit/reduce production of GDF-8 are of commercial interest.
Gene therapy; growth differentiation factor-8; OBF-8; AIDS; cachexia; neurodegenerative disease; amyotrophic lateral sclerosis; obesity; muscular dystrophy; musculodegenerative disease; tissue repair;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GDF-8 expression may also have a role in the therapy of abnormal growth of muscle, bone or adipose tissue. A GDF-8 monoclonal antibody, GDF-8 antisense molecule or dominant negative polypeptide could be used with foetal or adult muscle cells, bone cells or progenitor cells. These agents can be administered to a patient suffering from a disorder such as muscle wasting disease, neuro muscular disorder, muscle atrophy, osteoporosis, bone degenerative diseases, obesity or other adiporte
                                                                         Murine GDF-8 #1.

The present sequence is a GDF-8 protein, which was isolated in the present invention. GDF-8 is useful for treating neurodegenerative diseases (e.g. amyotrophic lateral sclerosis and muscular dystrophy), musculodegenerative diseases or in tissue repair due to trauma, obesity and disorders related to abnormal proliferation of adipocytes. GDF-8 is also useful for treating malignancies of the various organ systems, particularly cells in muscle or adipose tissues and in gene therapy for the treatment of cell proliferative or immunological diseases mediated by GDF-8. In addition, GDF-8 is also useful for treating muscle wasting disease, neuromuscular disorder, spinal cord injury, traumatic injury, congestive obstructive pulmonary disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New substantially purified growth differentiation factor-8 polypeptide, useful for treating muscle wasting disease, obesity, muscular dystrophy, neuromuscular disorder, acquired immunodeficiency syndrome and cachexia -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                muscle wasting disease; neuromuscular disorder; spinal cord injury; traumatic injury; congestive obstructive pulmonary disease.

Sequence 4, Application US/09841730
Patent No. US20020157126A1
Patent No. US20020157126A1
PAPLICANT: Lee Se-Jin
APPLICANT: McCherron, Alexandra C.
ITILE OF INVENTION: GROWTH DIFFERENTIATION FACTOR RECEPTORS,
TITLE OF INVENTION: ACONISTS AND ANTAGONISTS THEREOF, AND METHODS OF USING SAME
PILE OF INVENTION: NOUNEER: US/09/841,730
CURRENT APPLICATION NUMBER: 09/626,896
PRIOR FILING DATE: 2000-07-27
PRIOR APPLICATION NUMBER: 09/485,046
PRIOR FILING DATE: 2000-01-31
PRIOR PILING DATE: 1996-07-28
PRIOR PILING DATE: 1996-08-01
NUMBER OF SEQ ID NOS: 29
SEPTIARE: FastSEQ for Windows Version 4.0
LENGTH: 376
TYPE: PRT
ORGANISM: Mus musculus
